DETAILED ACTION

The following is a first action on the merits for Application Serial 10/802,689, which is a CONTINUATION of Application Serial 09/763,980. Claims 1-4 are pending.

Allowable Subject Matter

1. Claims 1-4 are allowed.
2. The following is an examiner's statement of reasons for allowance: The prior art of record fails to show or render obvious a bevel pinion shaft supported in a drive housing for a differential assembly as recited in independent claim 1, wherein the bevel pinion shaft is supported by two spaced and axially pre-tensioned *unilaterally loadable double-row tandem angular-contact ball bearings* having different diameters and different pressure angles and arranged in an O-arrangement, and particularly wherein an inner ring of the second angular contact ball bearing is supported in an axial direction with a deformable sleeve acting against an end of a shank of the bevel-pinion shaft, and a threaded piece is located on an end of the shaft so that both ball bearings can be pre-tensioned by adjusting the single threaded piece on the bevel-pinion shaft.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kawaguchi (US AP. 10/669,575) and Maret (US AP. 10/157,448) have been cited for disclosing similar bearing arrangements on a bevel gear differential shaft.
